

Knowledge and Experience

In the field of rigid plastic packaging, it takes a combination of skill and experience to provide tailor-made solutions for each customer's individual requirements. A.T.S. Engineering Inc. knows this well. Over the years, we have worked hard to earn our reputation as single-source specialists in high-speed filling, sealing and overcapping machines for this demanding market. We merge technical expertise with an understanding of what our customers need.

Diverse Product Range

A.T.S. Engineering Inc. designs and manufactures high-quality equipment that suits a wide range of applications. Our durable rotary and straight-line machines can package a variety of liquid and viscous products including juices, sauces, dips, salads, sour cream, cottage cheese, ricotta, yogurt and ice cream. Adaptable for either single or multiple filling operations, our affordable machines meet or exceed USDA, FDA and 3A standards. Our technology is field-tested right on the shop floor, where long-term performance really matters. The result: reliable machines that can be counted on for years of trouble-free operation.

Total Packaging Solutions

At A.T.S. Engineering Inc. we do more than simply build equipment. We are your packaging machine consultants. From installation to startup and training, we use our long history of applications experience to ensure that customers get optimum results every step of the way. From concept to completion, we consider ourselves part of the process - and are never satisfied until you are.

The logo for A.T.S. Engineering Inc. features the lowercase letters 'ats' in a bold, red, sans-serif font. The letters are contained within a light gray circular background that has a subtle gradient and a slight drop shadow, giving it a three-dimensional appearance. The background of the entire advertisement is a grayscale image of industrial machinery, specifically what appears to be a rotary filling or sealing machine, with various metal components, pipes, and a large circular opening visible.

Engineering Inc.
Specialists in Packaging Machines

“Commitment to Excellence”

Machinery Features

- Fills liquids, preset, viscous, semi-viscous and multiple fill products
- Fills 6 to 80 ounces
- Fills 40 to 80 cups per minute on rotary machines and up to 320 cups per minute on straight-line machines
- No cup, no fill, no seal, no overcap options
- No-drip cut-off nozzles
- User friendly touch-screen control panel
- Heat-seal tamper-evident pre-die cut foil or film rollstock
- Automatically applies flush-style and recessed lids
- Designed to meet or exceed USDA and FDA regulations and built-in compliance with 3A standards

Machinery Options

- Gas flush of container headspace available
- Bottom up fill
- Multiple filling operations in the same cup
- Guarding with safety interlocks
